Meet Ms. Hipp

Brain Talk

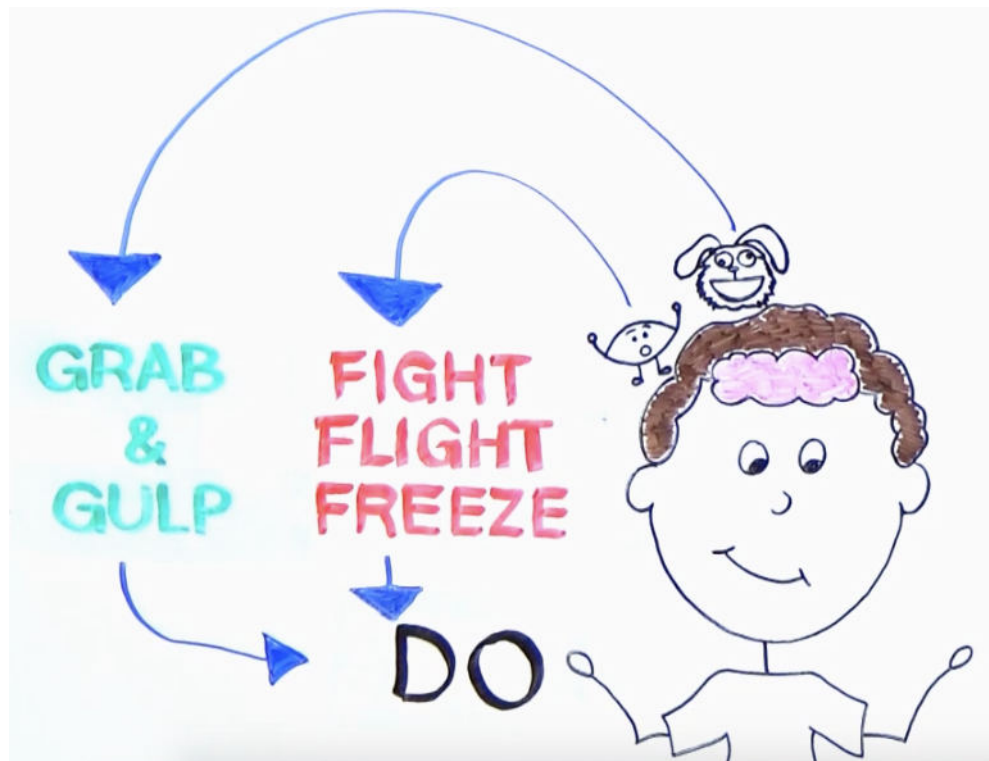

©Bogen & Lindemuth, 2015

Myg and Buster live in the limbic system of the human brain.

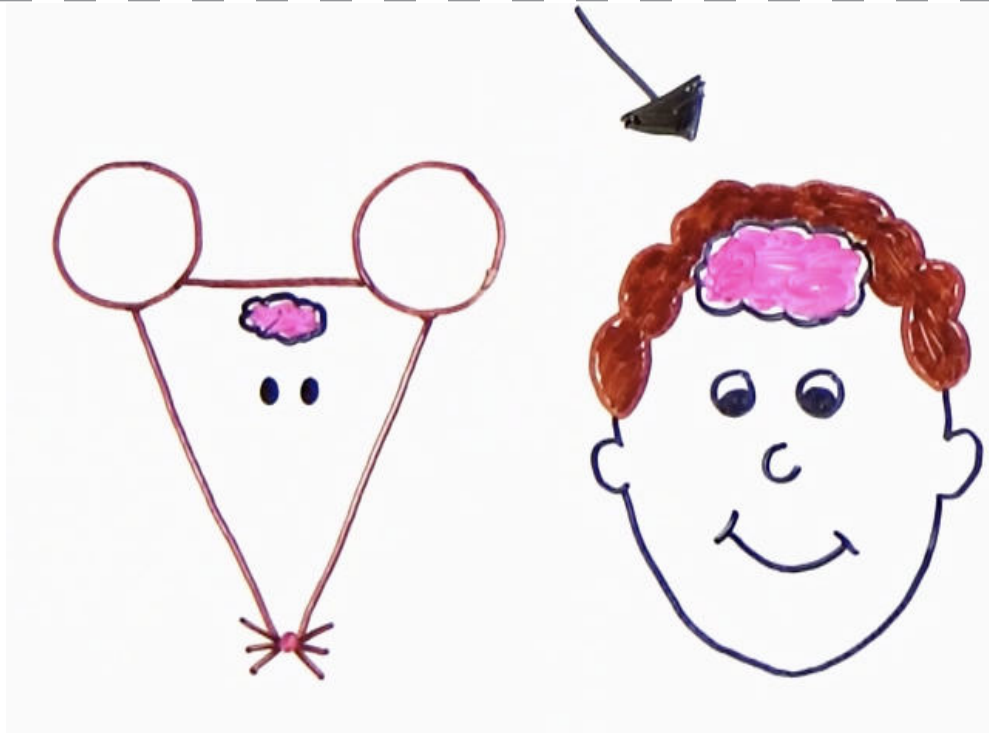

During a Myg Moment, Myg sends a fight, flight, or freeze impulse through the brain.

During a Buster Bam, Buster sends a grab and gulp impulse through the brain.

4

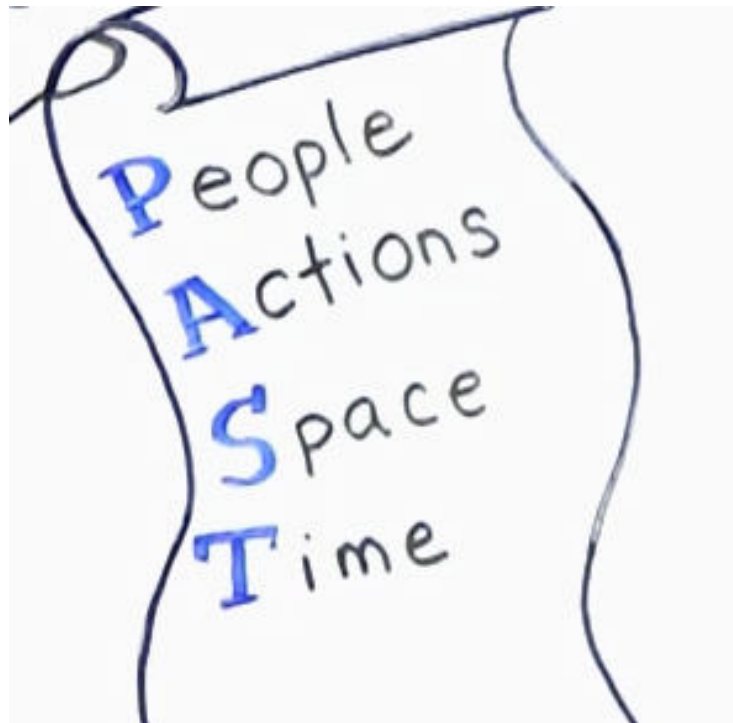

Our brains are much more complex than Mr. Mouse's brain, so we don't just have to react to things that happen to us. We get to make choices!

5

Since our choices are often dependent upon how things went in the past, we have a personal memory library in the brain called the hippocampus. We'll call it Ms. Hipp.

Ms. Hipp keeps track of an experience from a personal point of view by recording who was there, what happened, and where and when it occurred.
