

Thinking Tool

KNOW, WHAT, HOW, LEARNT [KWHL]

This thinking strategy is very effective to do at the beginning and end of a topic.

Individually, in small groups or as a class, think about what you already know and relate to about the topic in the **Know** column.

In the **What** column, write what you need to discover about the topic.

In the **How** column, describe how you are going to research the topic.

After you have completed the topic, reflect on what you have learnt and in the **Learnt** column write your new understandings and connections.

From everyone's input, discuss the **Know, What, How, Learnt** as a class.

[illegible]
