

Statistics.

Is when someone thinks the statistics of something that has happened affects the chance of something else happening.

E.g. three tails have come up on three tosses of a coin, therefore there is a big chance the next toss will be a tail.

- Describe a time when you have thought this way.

- Why do you believe that thinking this way may have caused you to arrive at decisions which really were not logical?

- What is one thing you could start doing to avoid thinking this way?
